Abstract: The invention relates to a method for loading and managing test tools into the testing system in testing device that includes test server and its network connection. The testing device down loads test tools from the test server by using network connecting line, and the test tools are used to test whether functions of the test device itself are good or not. The test server introduces the use of the test tools, description of testing procedure, configuring tools and realizes version maintenance by executing management program of test tools. The testing device starts the frame program of test start-up to create test start-up frame so as to start-up the test device and connect the test device to the test server through network.
